Rolan Lobo

Python-Focused Full-Stack Developer

Building AI-powered applications, secure web platforms, and cross-platform software. Passionate about problem-solving and developing practical solutions.

Academic Details

- **Bachelor of Engineering (B.E.) Computer Engineering**
  BCET, Bengaluru;
  CGPA: 8.6

Soft Skills

Analytical | Collaborator | Leader | Adaptable

Technical Skills

- **Programming Languages:**
  Python, JavaScript, TypeScript, Rust
- **Frontend:**
  React.js, HTML5, CSS3, Tailwind CSS
- **Backend:**
  Flask, Node.js (Express), REST APIs, JWT Auth
- **Databases:**
  MySQL, SQLite, PostgreSQL, MongoDB
- **Tools:**
  Git/GitHub, Docker, Postman, GitHub Actions, Linux.

Core Competencies

Full-Stack Development

AI/ML Integration

Secure Application Development

API Development

Cross-Platform Development

Network Monitoring & Analysis

Algorithm Design

Containerization & CI/CD

System Scalability

Profile Summary

- Python-focused Full-Stack Developer experienced in building AI-powered applications, secure web platforms, and cross-platform software.
- Proficient in Python, Flask, React, REST APIs, database integration, and AI/LLM integration.
- Developed projects involving geospatial site assessment, architectural planning, steganography, and secure file management.
- Strong problem-solving and **debugging skills**, with an interest in developing practical and **scalable software solutions**.

Academic Projects

BuildWise AI – AI-Powered Civil Engineering & Site Feasibility Platform
GitHub: https://github.com/rolan-r-n-r/BuildWise_AI

An intelligent platform that transforms geographic locations into site feasibility assessments and construction planning insights.

- Developed a geospatial platform to assess potential construction sites using interactive maps and geographic coordinates.
- Implemented site analysis covering seismic risk, flood susceptibility, terrain, and estimated construction costs.
- Integrated Groq/Gemini-powered reasoning with an offline fallback for AI-assisted site analysis.
- Built a constraint-based architectural layout engine and automated PDF report generation using ReportLab.

InvisioVault – Steganography & Polyglot File Web App
GitHub: https://github.com/rolan-r-n-r/InvisioVault

Hide anything inside images, or create wild dual-format polyglot files — all in a slick React + Flask app.

- Developed a full-stack application (React + Flask) that hides files inside images using LSB-based steganography.
- Built a polyglot engine that generates files functioning as **two formats at once**.
- Added password protection, AES-256 encryption, auto-compression, and support for multiple file types.
- Designed a clean UI with dark mode, responsive layout, and a REST API for integration.
- Live: https://invisio-vault.vercel.app

GitHub Contribution Summary

- Repositories: 17+
- Commits: 2500+
- Featured Projects: BuildWise_AI, NetPlus, InvisioVault.
- GitHub: https://github.com/rolan-r-n-r.
